YOUR CHAIR, YOUR WAY... EACH CHAIR IS INDIVIDUALLY MADE TO ORDER

Six Backs • Seven Seats • Thirteen Different Arms...

Most can be interchanged easily to meet the individual preferences or needs of your diverse workforce.

PICK YOUR:

Mechanism

BodyBilt has three different mechanisms – the J, the K, and the R – that tilt and position your chair to meet your individual needs.

Back

We offer six different back sizes that provide back support positioned just right for you. Check out the optional S'port Ridge™ thoracic support.

Seat

We offer seven different seats which are designed and contoured to fit the individual to reduce seated pressure.

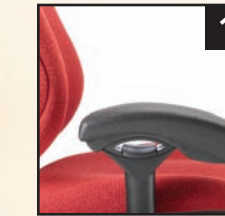

Arms

Choose from thirteen arms that provide ergonomic support and a full range of movement.

Task SEATING

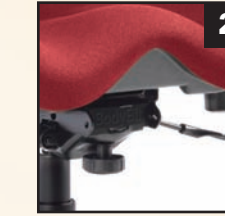

BODYBILT

OPTIONS

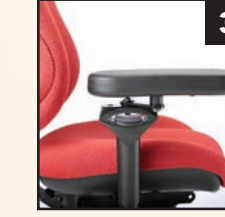

1

1. 4-Arm™
The standard armrest with four adjustments – width, height, angle, and articulation.

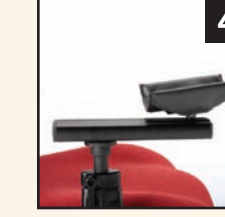

2

2. Seat Slider Adjustment
The Seat Slider option adjusts the seat 2.5 inches forward and backward with a simple adjustment handle just below the seat. The adjustment can be made while sitting in the chair.

3

3. S'port™ Pivot! 4-Arm
Pivot arms are available in three sizes of arm pads: Mini S'port™ (7"), S'port™ (12") and Super S'port™ (16").

4

4. Linear Tracking™ Arm
This uniquely dynamic arm provides constant support from keyboard to mouse at your work environment, using a leather sling to support your forearm with almost effortless motion.

5

5. S'port Ridge™
Vertical foam provides exceptional mid-back (thoracic) support while promoting improved posture.

6

6. Air Lumbar™ Pump
BodyBilt's most popular option allows the user to adjust the lumbar support to their preferred firmness.

7

7. Medical & Industrial Stool Applications
Ergonomic stools for environments requiring either Clean Room (up to Class 10) or ESD (electrostatic dissipative properties).

BODYBILT®

The laws of work:
**FITTING THE TASK TO THE WORKER
INTERFACE OF MAN AND WORKSPACE**
No matter how you define it,
ergonomics plays a big role in seating.

BODYBILT

The **adjustability** of the chair allows you to position the chair into the exact supportive posture you desire.

<p>J756</p>  <p>#6 Seat – Minimally contoured seat designed for petite individuals.</p>	<p>J758</p>  <p>#8 Seat – Minimally contoured seat designed for moderate sized workers.</p>	<p>R2407</p>  <p>R-Mechanism (Synchro-tilt) – Features easily accessible controls with anti-kick tilt lock.</p>	<p>J2407</p>  <p>#7 Seat – Our most popular moderately contoured seat fits the largest percentage of workers in size, weight and frame.</p>	<p>K2502</p>  <p>#2 Seat – Deeply contoured seat that distributes seated pressure without creating pressure points.</p>

**MODULARITY
COMFORT
ADJUSTABILITY**

Ergonomics seeks to provide comfort for the worker.

Who needs comfortable, task-driven seating?

YOU DO, IF YOU SPEND MOST OF YOUR WORKING HOURS SEATED. At BodyBilt®, we create and produce customized chairs that are scientifically engineered to better position you in the workplace and home office, minimizing the physical stress that results from limited mobility and repetitive motion. We've taken ergonomics "from outer space to the workplace," as our products are designed to help seated workers mimic the same comfortable, stress-free posture their bodies would naturally assume in a zero-gravity environment.

While sitting may be good for business, it's usually not good for bodies. Whatever the work environment, every

worker who performs most of his or her job tasks in a sitting position is at risk for injury. The U.S. Department of Labor attributes more than 60% of all occupational illnesses to repetitive motion disorders and 40% of recorded worker absences to back injury.

Our chairs combat the counterproductive effects of long hours seated at work with three integral features:

Modularity – BodyBilt chairs offer 26 different modular components (6 backs, 7 seats and 13 different arms) which can be configured to meet individual preferences and specific task needs.

Adjustability – Every BodyBilt chair utilizes a patented 10-Point Posture Control™ system to reduce

Six Backs • Seven Seats • Thirteen Different Arms... most of these Task options can be interchanged easily to meet the individual preferences or needs represented by a diverse workforce.

What Makes A Chair Comfortable... adjustability is crucial to ensure a proper fit, resulting in effective weight disbursement to reduce seated pressures.

10-Point Posture Control™... the 10-Point Posture Control™ System reduces tension in key muscle groups by up to 75% – minimizing stress while maximizing productivity.

tension in key muscle groups by up to 75% for minimum stress and maximum productivity.

Comfort – BodyBilt's modular, adjustable seating ensures a proper fit for every body type, resulting in effective weight distribution and reduced seating pressure.

Highly Ergonomic Design

BodyBilt provides exceptional back support and comfort, adaptable to almost every body type and practically any task. Ideally suited to desk-top intensive tasks, BodyBilt chairs are frequently selected by those in computer-intensive office environments from law firms to banks and from medical offices to manufacturing plants. Because no two workers and their tasks are the same, our chairs

enable complete customization and user control with 26 component options and 10 adjustable ergonomic features. Every BodyBilt chair is delivered with a 30-day satisfaction guarantee and the kind of customer support that makes repeat customers and referrals the norm, not the exception.

Sustainability

Sustainability refers to conserving an ecological balance by avoiding the depletion of natural resources. Our goal at ErgoGenesis is to build our products in the most environmentally friendly way possible. By using foam made from soybeans, upholstering with fabrics that contain recycled material, and by producing renewable products with a longer lifespan, we are able to

contribute in a meaningful way to our customers and our environment.

What are our customers saying about BodyBilt Chairs by ErgoGenesis?

"Wow oh wow. How did I ever live without your chairs? Took me a while to get it all adjusted, but now that it is... It is fabulous! My shoulders don't hurt at the end of the day and I have more energy. Feel all around better! Who knew a chair could be so powerful?"

"I'm amazed at how I'm able to configure the chair to my body's needs. All this time I've been trying to fit my body into a standard 'static' office chair with a couple of adjustments. Now that I can fine tune my chair I'm finding a remarkable comfort level which I didn't know existed."

ErgoFusion™ is a collection of ergonomic workstation tools from ErgoGenesis that is designed to complement BodyBilt® seating solutions. Each tool is made for the tasks we all perform each and every day. ErgoFusion™ enhances adjustability. We all face the same obstacle – not all people are the same shape and one size does not fit all. This suite of ergonomic products offers you a completely tailored workstation including:

- Keyboard Trays & Accessories
- Workstation Corner Makers
- Document Holders
- Desk/Work Surface Risers
- Flat Screen Desk Mounts
- Footrests
